📍 Bhiwani, Haryana

ABOUT ME

Full-Stack Developer and BCA candidate with 1+ years of internship experience building scalable web applications. Specialized in designing MVC architectures, securing applications with JWT, and optimizing RESTful APIs. Proven track record of improving document workflows and real-time system performance through modern JavaScript frameworks.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), SQL, HTML5, CSS3
- **Front-End:** React.js, Tailwind CSS, Bootstrap, Ant Design, AJAX
- **Back-End:** Node.js, Express.js (MVC Architecture), RESTful APIs
- **Databases & Tools:** MongoDB, Postman, Git/GitHub, Socket.IO, Nodemailer, Multer
- **Core Competencies:** Asynchronous Programming, Secure Authentication (JWT)

WORK EXPERIENCE

Code Quotient | February 2026 – Present

Full-Stack Developer Intern

- Developing real-world MERN stack applications with a focus on writing clean, modular, and maintainable code.
- Collaborating on backend performance tuning, identifying bottlenecks, and optimizing database queries.

Code Quotient | June 2025 – Nov 2025

Full-Stack Developer Intern

- Deployed production-ready full-stack applications utilizing Node.js and MongoDB with responsive UIs.
- Engineered secure user authentication pipelines using JWT and integrated automated workflows via Nodemailer.
- Utilized Git/GitHub for version control.

Code Quotient | June 2024 – July 2024

Software Engineering Intern

- Built interactive frontend features using JavaScript and AJAX, noticeably reducing page load times.

PROJECTS

E-Sign | Full-Stack Digital Document Platform

[Live Demo](#) [GitHub](#)

- Developed a full-stack digital document signing platform with secure authentication and role-based access control using JWT and cookies. Implemented end-to-end document workflows including upload, signing, and status tracking. Designed interactive dashboards for monitoring user activity and document metrics. Built responsive UI using React.js and Ant Design, with a scalable backend using Node.js, Express.js, and MongoDB. Ensured secure file handling, validation, and efficient data management.

Ride Sharing | Real-Time Transit Application

[Live Demo](#) [GitHub](#)

- Developed a ride-sharing web application that allows users to publish and book rides efficiently. Implemented secure user authentication using JWT and built scalable RESTful APIs with Node.js and Express.js. Integrated map APIs for route visualization and distance calculation. Enabled real-time chat functionality for communication between drivers and passengers. Designed a responsive and user-friendly interface for seamless user experience. Utilized MongoDB for data management and Git for version control.

File System Navigator | Low-Level Backend Logic

[GitHub](#)

- Built using Core Node.js without Express, the project demonstrates strong understanding of HTTP handling, file system operations, and backend logic. File System Navigator is a web application that allows users to analyze and explore directory structures by entering a folder path. It recursively scans folders to generate a hierarchical view and provides statistics such as total files and folders. The system also includes a structure-based search feature that helps users locate files and shows step-by-step navigation to reach them. It implements cookie-based session authentication with automatic session expiration for secure access. Additional features include a Help & FAQ page and a Contact form for user queries.
